FAB-CATAMARAN AMBULANCE

FAST AMBULANCE BOAT & FIRE AND RESCUE

The D-SAR-13 is designed and built on a isometrical catamaran with hydrofoil supports. This design has proven itself under adverse offshore conditions which results in an amazingly stable, seaworthy craft with good handling ability at all speeds. The “chine” hull ensures a soft ride in adverse sea states due to the angle at which it cuts the water. This state of the art hull form is derived directly from proven hull designs that are still in service and known for their

brilliant handling performance at high speeds. With a skilled helmsman at the wheel, the D-SAR-13 can be operated effectively and safely in a sea state of 6 on the beaufort scale. This vessels offers the crew a soft ride (due to the hull shape & hydrofoil supports) and can be used as a comfortable long range offshore craft.

Specifications:	
Length	13m
Beam	4m
Speed	35-55 knots
Displacement	7200Kg
Equipment	Fire Fighting Life Support
